

Insights from the Dubai Real Estate Intelligence Dashboard

1. Total Market Listings

The dashboard shows a total of **50,000 property listings**, indicating a large and active real estate market with a wide variety of properties available for buyers and investors.

2. Average Property Price

The **average property price is 224.83K**, suggesting that most properties in the dataset fall within a mid-range price category, making them accessible to a broad group of buyers.

3. Average Property Size

The **average property size is 2.01K square feet**, indicating that most properties are medium-sized residential units suitable for families.

4. Highest Property Price

The highest recorded property price in the dataset is **492.20K**, which represents premium or luxury properties in the real estate market.

5. Average Price per Square Foot

The **average price per square foot is 113.31**, which helps measure property value and allows investors to compare properties of different sizes.

6. Dominance of Mid-Range Listings

The **listing category distribution chart** shows that **Mid-Range properties have the largest share of listings**, around **28.53K properties**, indicating that this category dominates the market.

7. Budget and High-End Market Segments

Budget properties represent about **19.05K listings**, while High-End properties represent a much smaller portion of the market, showing that luxury properties are limited compared to other categories.

8. Balanced Neighborhood Distribution

The **property distribution treemap** shows that property listings are evenly distributed across neighborhoods:

- **Suburb:** 16.72K listings
- **Rural:** 16.68K listings
- **Urban:** 16.60K listings

This indicates balanced development across different regions.

9. Listings by Neighborhood and Category

The bar chart shows that **Mid-Range listings dominate in Suburban, Rural, and Urban areas**, while High-End listings remain the smallest category in every neighborhood.

10. Property Size vs Price Relationship

The **scatter plot comparing square feet and price** shows a positive relationship, where larger properties generally have higher prices.

11. Property Age Distribution

The **property age distribution chart** shows that the dataset includes properties across a wide range of ages, suggesting a mix of both new developments and older properties.

12. Interactive Filters for Analysis

The dashboard includes filters for **Bedrooms, Bathrooms, Price, Neighborhood, and Listing Category**, allowing users to interactively explore different segments of the real estate market.
